8.44 B. The buffer capacity is the amount of acid or base that can be added before the pH begins to change significantly. Every buffer that is made has a certain buffer capacity, and buffer range. Plus, you can compare your scores with others online. H3PO4+NaH2PO4 Answer: A Explanation: Na2HPO4 + Na3PO4 is a type of simple buffer which is a combination of a mixture of an acid salt and normal salt of a poly basic acid. H2CO3+Na2CO3 D. 4. 8.50 Therefore here buffer capacity = 3/5 divided by 2 = 0.6/2 = 0.3. The buffer capacity is given as two units for a change in pH by Unity. eAAAExcuses, ExcusesAAA is built around a teacher who has grown impatient with her students for not turning in their homework. Na2HPO4 + Na3PO4 B. The pH of the solution is directly proportional to the carbonate concentration when added to the solution. If the pH of a substance is given by 3 then what is the pOH of the substance?a) 3b) 7c) 14d) 11Answer: dClarification: We know that the sum of the pH and pOH of any substance is equal to 14 that is pH + pOH = 14. You need to brush up on your typing skills, and then check your progress with a free typing test. 3. 11. NH4OH B. To practice Chemistry Question Papers for Class 11. In order to continue enjoying our site, we ask that you confirm your identity as a human. False Answer: A Explanation: The buffer capacity depends essentially on 2 factors: Ratio of the salt to the acid or base. Carbonic acid and sodium bicarbonate are present in blood as a buffer.a) trueb) falseAnswer: aClarification: A solution that resists the change in its PH value by the addition of a small amount of acid or base is called a buffer solution. 50 moles D. 8.54 D.
